This invention describes a novel antibody specifically recognizing phosphaticaldylinosation-3,4.5-triphosphate (PIP3). The antibody of the invention is used in immunogenic compositions in which a dead Salmonella genus microbe is used as an adjuvant and mixed with PIP3. The antibody can be used in an immunosasay contraining a step in which the above antibody or its variable region is reacted with PIP3 present in a sample and the bond based on their immunological reaction. The method can determine PIP3 easily in a high sensitivity. This sequence respresents the murine PIP3 recognizing monoclonal antibody variable region heavy chain complementarity determining region, CDR1 described in the method of

Cohen IR, Rotter V, Erez-Alon N, Herkel J; WPI; 2000-339512/29 Treatment of systemic lupus erythematosus by down-regulating the autoimmune response to the C-terminal DNA-binding domain of the p53 protein by an active compound comprising of antibodies to p53 or fragments of p53

Claim 78; Fig 10; 87pp; English.

The patent discloses a method for the treatment of systemic lupus erythematosus (SLB) by down-regulating the autoimmune response to the C-terminal DNA-binding domain of p53 protein by an active compound. The present sequence is a IDI-2 H1 peptide which comprises the complementarity determining region (CDR) of the heavy chain of IDI-2 monoclonal antibody (Mab). The IDI-2 mab is an anti-idotypic antibody/Ab2 mAb specific for PAb-421 which is an Ab1 mAb specific to the C-terminal DNA-binding domain of murine p53 protein. The peptide corresponds to residues 19-38 of IDI-2 heavy chain the diagnosis, prevention and treatment of SLE in humans.

```

The invention relates to an isolated or purified peptide (I) which binds Hepatitis B virus (HBV) core antigen (HBCAg) or HBV E antigen (HBCAg).

(I) is useful for treating or preventing Hepatitis B virus (HBV) infection, by identifying a subject in need of a molecule that inhibits HBV infection, and providing the subject with (I). (I) is also useful for determining the presence of HBV in a biological sample, and for hBCAg and/or HBCAg and processing and uptake of HBCAg and/or HBCAg and or youther (I) inhibits B cell mediated processing and uptake of HBCAg and/or HBCAg and/or HBCAg and or youther (I) inhibits B cell mediated processing and proliferation or yotokine production. (I) is also useful for modulating poptides, derivatives or modified peptides, synthetic molecules including peptides, derivatives or modified peptides, synthetic molecules including peptides, derivatives or modified peptides, confidential as biocechnological conjugations and chemicals. (I) is also useful as detection reagents in conventional immunohistochemical techniques, as diagnostic reagents to detect HBV in protocol by monitoring the levels of HBCAg and/or HBCAg and/or HBCAg and doring and after treatment. AAU70766-AAU70876 represent Hepatitis B virus (HBV) core in the investion of the investion (HBCAg) or HBV E antigen (H 20 AA; Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequences given in AAR27008-11 are fragments which were used in the construction of an agent for the treating and prevention of hypercalcaemia. The agent contained a portion of the antihuman parathyroid hormone-related protein monoclonal antibody funtihuman PTHYP MAD). The MAD was used as the active component in the agent. The agent further comprises a rodent/human chimeric MAD which has a rodent variable region and a human constant region and recognises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antihuman parathyroid hormone-related protein; monoclonal antibody; variable region; rodent/human chimeric MAb; constant region; PTHFP.

                                                                                                                 ö
      This sequence is the single-stranded antibody of the invention, that has the capability of binding to a hepatitis B virus (HBV) core protein. Therapeutic agents can be formulated with the antibody for treatment of HBV infections by stopping proliferation of the virus through inhibition of viral DNA synthesis, and the gene encoding the antibody can be applied
                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Anti-DNA antibody which specifically binds DNA hairpin - useful to develop prods. for diagnosis and treatment of disorders, e.g. glomerulonephritis or systemic lupus erythematosus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hybridoma antibodies have been produced with the spleen cells of BALB/C mouse that had received multiple injections of mercuric ions reacted with glutathione to produce a mercuric ion coordinate covalent compound which was covalently bound to keyhole limpet hemocyanin (KLH). Eight hybridomas (1F10, 4A10, 1C11, 5G4, 23F8, 5B6, 5B6 and 3B8) were producing MADS that were strongly positive against glutatione-mercuric ions but negative against glutathione without mercuric ions. RNA was isolated from hybridoma cells with guanidine isothiocyanate. First strand cDNA synthesis was catelyysed were complementary to the 5' end of the CH1 domain of the heavy
                                                                                                                                                                                                                                                                                                                                                                                  Gaps
The present sequence is the heavy chain variable region of the anti-DNA monoclonal antibody (MAb) 7h3, which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAb can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephitis and systemic lupus erythematosus. It can also be used to generate reagents to screen
                                                                                                                                                               disorder.
Calf thymus DNA was used to immunise a MRL-1pr mouse, spleen cells
                                                                                                                                                                                                  from which were then fused with Sp2/0 myeloma cells to give hybridomas producing the anti-DNA MAb. 7b3 was found to react strongly with poly(dT), poly(dG) and poly(dI), moderately with single stranded DNA and weakly with poly(G).
                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                        for pharmaceutical agents, and treat and/or prevent an above

an appropriate V region primer. In addition, the VH primer AAQ97518 was used to amplify the mAb 2D5 and 5B6 heavy chains. The sequences of the PCR amplified nucleotides were determined. These are given in AAQ97498-097510 and the deduced AA sequences in AAR79241-R79250 & AAR78970-R78971. The descriptions of the SEQ ID nos given on pp 44-45 and in the claims are different from the descriptions in the sequence listings are
chain expressed by the hybridoma of interest, or to the 5' and of the C kappa domain. Some of the primers used for cDNA synthesis are shown in AAQ97511-Q97518. The primer used for cDNA synthesis of the variable region of a particular antibody polypeptide was also used for PCR amplification of that variable region, in conjunction with
                                                                                                                                                                                                                                                                                                                                                                                114 AA;

Fell HP; Francisco JA, Siegall CB, Wahl AF,

WPI; 2001-071080/08 N-PSDB; AAC91890 Anti-CD40 antibodies which immunospecifically bind CD40, useful for prevention and treatment of cancer, inflammatory diseases and disorders or deficiencies of immune system

Claim 3; Fig 2; 91pp; English.

The present invention provides the protein and coding sequences of anti-CD40 antibodies. These can be used in the treatment of cancer and inflammatory and immune system diseases, including systemic lupus erythematosus, scleroderma, inflammatory myositis, Sjogren's syndrome, mixed connective tissue disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, acute respiratory distress syndrome, pulmonary inflammation, osteoporosis, delayed type hypersensitivity, asthma, primary biliary cirrhosis and idiopathic thrombocytopaenic purpura.

The library produces a diverse repertoir of antibody fragments specific for 2-phenyl-5-oxazolone (phox). It was prepd. using CDNA generated from mRNA from mice immunised with phox coupled to chicked serum albumin. The VH and VL kappa sequences were separately amplified by PCR (see AAQ21474-84) and ligated into fdCAT2 (see AAQ21463) for expression on the phage surface as fusions with gene III. The resulting library of clones was diverse. Twenty three hapten binding clones es equenced revealing the eight different VH genes (A-H) in a variety of pairings with seven different VK genes (A-H) and a variety of pairings with seven different VK genes (A-H) (see AAR21264-92). Nearly all the VH genes belonged to gp 1, with only
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hoogenboom HRJ, Griffiths AD;

one, "E", being of gp 2 (VHox1). Of the twenty three clones sequenced, three were of type "D". Most of the clones were Vk-d combinations. The Kd of VH-B/Vk-d for phox-GABA was 10 nM Only two other combinations (of eleven tested) were found to have higher
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequences given in AAR27008-11 are fragments which were used in the construction of an agent for the treating and prevention of hypercalcaemia. The agent contained a portion of the antihuman parathyroid hormone-related protein monoclonal antibody (antihuman PTHYP MAb). The MAb was used as the active component in the agent. The agent further comprises a rodent/human chimeric MAb which has a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antihuman parathyroid hormone-related protein; monoclonal antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             variable region; rodent/human chimeric MAb; constant region; PTHrP
                                                              values. This suggests that phage bearing scFv fragments having weak affinities can be selected with antigen, probably due to the avidity of the multiple antibody heads on the phage. See also AAR21260-307, 309-311; AAR22450, 565-581.

```
The sequence shows the humanised mature heavy chain variable region of the mouse CMV5 antibody. Murine CDRs were used in a human WO I framework to produce a pure humanised immunoglobulin (Ig) which is capable of binding to the gH gHycoprotein of cytomegalovirus. The Ig is non immunogenic, due to the human framework, and has a strong affinity for its predetermined antiqen. They can be produced in large quantities via recombinant DNA and monoclonal antibody technology. The humanised Igs may be used alone or in combination with chemotherapeutic agents such as see also AAR25721-32.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New immunoglobulin(s) having murine CDRs in human framework regions - have lower antigenicity; useful for treating e.g. HSV, CMV, T-cell disorders, myeloid disorders and auto-immune

immunoglobulins involving expressing in a cell a nucleic acid encoding a humanised version of an immunoglobulin. This is obtained by comparing a donor and human immunoglobulin and producing a combined antibody which contains part of each. These are useful in the treatment of graft-versus-host disease, transplant rejection, autoimmune diseases such as diabetes, rheumatoid arthritis, myasthenia gravis, multiple sclerosis and systemic lupus erythematosus, herpes infections, CMV virus infections demonstrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

when the VH (AARR8752) and VL (AAR88753) regions of anti-DNP scFv U7.6 were expressed in COS-7 cells transfected with a vector carrying the encoding DNA sequences (AAT12612 and AAT12613), only low levels of secretion were achieved; exit from the endoplasmic reticulum was identified as the rate-limiting step. Increasing the degree of glycosylation of the scFv, by replacing VH Lysl9 with Asn (see also AAR88754), increased the secretion rate. Additional glycosylation can also decrease antigenicity, modify ligand binding affinity and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Single-chain Fv molecules with additional glycosylation sites increased rates of secretion, decreased antigenicity, modified ligand binding affinity and are protected from proteolytic degradation
                                              Single-chain Fv molecules with additional glycosylation sites increased rates of secretion, decreased antigenicity, modified ligand binding affinity and are protected from proteolytic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A modified VH chain (AAR88754) of anti-DAP scFv U7.6 (see also

The protein was used to produce a fusion protein of light chain variable region-linker-heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                          Delivering agents to target cells - where monospecific binding proteins are administered to a host and bind to target cells, followed by admin. of multivalent antibodies to direct the agents to the target cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

This invention describes a novel antibody specifically recognizing phosphatically institution. A.f.-triphosphate (PIP3). The antibody of the invention is used in immunogenic compositions in which a dead Salmonella genue microbe is used as an adjuvant and mixed with PIP3. The antibody can be used in an immunoassay containing a step in which the above antibody or its variable region is reacted with PIP3 present in sample and the bond based on their immunological reaction. The method the mutrine PIP3 easily in a high sensitivity. This sequence represents the mutrine pIP3 recognizing monoclonal antibody variable region heavy chain described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Murine; p53 protein; PAb-421; monoclonal antibody; mAb; IDI-2; anti-idiotypic antibody; DNA-binding domain; dermatological; immunosuppressive; antiinflammatory; autoimmune response; SLE; systemic lupus erythematosus; diagnosis; treatment; autoantigen; heavy chain variable region; VH; complementarity determining region; CDR.

                 position 19. The asparagine site increases the degree of glycosylation of recombinant scrv U7.6 produced by COS-7 cell transfectants, leading to an increased rate of glycosylation from the endoplasmic reticulum. The method allows scrv molecules sepable of binding to specific ligands to be produced in, and secreted by, eukaryoric cells. Decreased antigenicity and increased resistance to proteolysis may also result from

The invention relates to an isolated or purified peptide (I) which binds Hepatitis B virus (HBV) core antigen (HBCAG) or HBV E antigen (HBCAG).

(I) is useful for treating or preventing Hepatitis B virus (HBV) infection, by identifying a subject in need of a molecule that inhibits HBV infection, and providing the subject with (I). (I) is also useful for determining the presence of HBV in a biological sample, and for inhibiting B cell mediated processing and uptake of HBCAG and/or HBCAG, by determining whether (I) inhibits B cell mediated processing and uptake of HBCAG and/or HBCAG and/or HBCAG and/or HBCAG and/or HBCAG and/or HBCAG and/or HBCAG and (I) is also useful for modulating an immune system response. (I) is useful as a template for a design of synthetic molecules including peptides, derivatives or modified peptides, coptionized on expression of each of modulating and immune system response. (I) is also useful as biotechnological tool, diagnostic reagent and as active inqueredient in pharmaceuticals. (I) is also useful as detection reagents in conventional immunchiscochemical techniques, as diagnostic reagents to detect HBV in protocol by monitoring the levels of HBCAG and/or HBCAG and/or HBCAG and to the efficiency of an HBV treatment protocol by monitoring the levels of HBCAG and/or HBCAG and during and after treatment. AMUTO766, AMUTO766, represent HBCAG and with a protocol by monitoring the levels of HBCAG and/or HBCAG and and a protocol by monitoring the levels of HBCAG and/or HBCAG and/or HBCAG and/or HBCAG and/or HBCAG and/or
                                                                                                                                                                                                                                        Novel peptide that binds to hepatitis B virus core or E antigen, useful for treating and preventing hepatitis B virus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Humanised antibody, variable heavy region; buried residue modification; VH; HuMc3 VH; BA46 antigen; human; milk fat globule; HMFG; lactation; fat globule membrane; murine; mammal; epithelial cell; breast cancer; breast membrane glycoprotein; therapy; immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antigen (HBcAg) or HBV E antigen (HBeAg) binding partners as described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 41; DB 2 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The patent discloses a method for the treatment of systemic lupus erythematosus (SLE) by down-regulating the autoimmune response to the C-terminal DNA-binding domain of p53 protesin by an active compound. The present sequence is a heavy chain variable region of IDI-2 an anti-idiotypic antibody/Ab2 monoclonal antibody (mAb) specific for PAb-421 which is an Ab1 mAb specific to the C-terminal DNA-binding domain of murine p53 protein. The Ab1 and Ab2 mAbs and peptides based on complementarity determining regions of light and heavy chain variable regions of these antibodies, are examples of active compounds useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatitis B virus, virucide; immunomodulator; hepatotropic; HBV; antiinflammatory; HBV core antigen; HBcAg; HBV E antigen; HBeAg; B cell mediated processing; T cell proliferation; cytokine production;

                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                           murine antibody Huxca VI. The Most Will, was humanised using the buried residue retention (BR-R) technique. The Most sequences can also be modified using the buried residuemedification, where important non-human framework residues are unaffected (see AAW06442 and AAW06443). The Most antibody binds to the BA46 antigen of the human milk fat globule (HMG5). The milk fat globule membrane is derived from the apical surface of the mammalian epithelial cell during lactation, and therefore is a source for breast membrane glycoproteins. The antibody can be used in an intro method to detect a HMG5 antigen (or antigen fragment), and to diagnose the presence of the antigen in a subject. The antibody can also be used to deliver an agent to a target (within a subjects body). Containing a HMG5 antigen. The antibodies can also be used for the humanised antibodies retain their high affinity binding to the antigen, they are useful for immunodiagnostic and immunotherapeutic
                                                                                                                                                                                                                                                                                                                                                                                        ö

This sequence represents the variable heavy (VH) chain of the humanised murine antibody HuMc3 VH. The Mc3 VH sequence was humanised using the buried residue modification technique, where important non-human framework residues are unaffected. The Mc3 antibody binds to the BA46 antigen of the human milk fat globule (HMFG). The milk fat globule common the far globule (HMFG). The milk fat globule coll during lactation, and therefore is a source for breast membrane glycoproceins. The antibody can be used in an in vitro method to detect antigen (or antigen for antibody can be used in an in vitro method to detect antigen in a subject. The antibody can also be used to deliver an agent to a target (within a subjects body), containing a HMFG antigen. The antibody can also be used to deliver an agent to a target (within a subjects body), containing a HMFG antigen. The antibodies can also be used for diagnosis, prognosis, and therapeutic applications of breast cancer. As the humanised antibodies retain their high affinity binding to the antigen, they are useful for immunodiagnostic and immunotherapeutic applications in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
Recombinant Mc3 antibody which binds BA46 antigen of HMFG -comprises a modified heavy or light chain variable region, useful in the diagnosis and therapy of breast cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polymerase chain reaction; primer; PCR; amplify; murine; heavy; light; chain; variable; constant; region; anti-human; transferrin; receptor; antibody; brain; capillary; endothelial cell; conjugate; neuropharmaceutical; diagnostic; agent; tumour; AIDS; stroke; epilepsy; Parkinsons disease; Alzheimers disease.

pAH4807. This vector represents the cloning of the human gamma isotype, gamma 3, with the variable region of the murine monoclonal antibody 128.1. This plasmid encodes a chimeric monoclonal antibody in which the heavy chain (VH) is derived from a murine source and the sequences encoding CH1. CH2 and CH3 are derived from a human source. This vector, in combination with the chimeric light chain vector, pAG4611 (see also AAQ43845), was transfected into SP2/0 cells and clones were isolated. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked used to prevent neurological disorders eg. brain tumours, also be used for diagnostic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in AAR41710-14 are encoded by the expression vector

                                                                                                                                                                                                                                                                                                                                                    The sequences given in AAR38258-59 represent the light and heavy chains respectively, of the chimeric antibody 128.1. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial calls. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumnours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for diagnostic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polymerase chain reaction; primer; PCR; amplify; murine; pAH4625; heavy; light; chain; variable; constant; region; anti-human; pAH4807; transferrin; receptor; antibody; brain; capillary; pAH4808; gamma-2; endothelial cell; conjugate; neuropharmaceutical; gamma-3; gamma-4; diagnostic; agent; tumour; AIDS; stroke; epilepsy; monoclonal; Parkinsons disease; Alzheimers disease; SP2/0 cell.

                                    Murine 128.1 VH/human gamma-2 CH1 encoded by plasmid pAH4625.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibody conjugates specific for transferrin receptor - used for diagnosis and treatment of cancer, AIDS and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (ALKE-) ALKERMES INC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 1993-196742/24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB; AAQ43846.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26-NOV-1991;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-NOV-1992;
                                                                                                                                                                                                                                                                                                                                                                                                                   WO9310819-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                          10-JUN-1993
                                                                                                                                              Synthetic

                                                                                                                                                                                                                                                          Region
                                                                                                                                                                                                                                                                                  Region
                                                                                                                                                                                                                                                                                                                                 Region
                                                                                                                                                                                                                                                                                                                                                         Region
                                                                                                                                                                                                                                                                                                                                                                                  Region
   The sequences given in AAR41682-85 are encoded by the expression vector, pAH4602. This vector contains open reading frames encoding the heavy chain variable region (VH) of the antibody 128.1, an ampicillin resistance gene and a histidine (histidinol) selection marker. Transcription of the VH gene is from the VH promoter of the murine 27.44 gene. The vector also includes a heavy chain immunoglobulin enhancer and the human gammal constant region (CH). The VH region of 128.1 was isolated by polymerase chain reaction and cloned into plasmid pAH4274. This was achieved by digesting the plasmid and the product with EcoRV and NheI. The VH gene was inserted in-frame with the human gammal CH region CH at the 3' end of the VH-J region by means of a NheI site. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibody may be used in a conjugate in which it is linked to a neuro-pharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological discorders eg. brain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for
                                                                                                                                                                                                                                                                                                                                                                                          Antibody conjugates specific for transferrin receptor - used for diagnosis and treatment of cancer, AIDS and neurological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 41; DB 14; Length 235; 100.0%; Pred. The sequences given in AAR41707-09 are encoded by the expression vector pAH4625. This vector represents the cloning of the human gamma isotype, gamma-2, with the variable region of the murine monoclonal antibody 128.1. This plasmid encodes a chimeric monoclonal antibody in which the heavy chain (VH) is derived from a murine source and the sequences encoding CHI, CH2 and CH3 are derived from a human source. This vector, in combination with the chimeric light chain vector, pAG4611 (see also AAQ43845), was transfected into SP2/0 cells and clones were isolated. 128.1 is an anti-human transferrin receptor antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                were isolated. 128.1 is an anti-human transferrin receptor. which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may

                                                                                                                                                                                                                                       The present sequence is the protein sequence of anti-mesothelin scFV antibody SS. This single-chain antibody was produced by immunising a mouse with cDNA encoding mesothelin, creating a phage library from mRNA isolated from the spleen of the immunised animal, and enrichment of anti-mesothelin phage over 3 rounds of panning. scFV SS is composed of a heavy chain variable region (WH) joined to a light chain variable region (WL) via a peptide linker. According to Kabat's classification, the VH belongs to sub-group IIA and family V and the VL belongs to sub-group IIA and family V and the VL belongs to sub-group IIA and adissociation constant of less than 3 x 10 power -8 M and specifically pinds to cells expressing mesothelin on their cell surface. The antibody comprises SS scFV, the VH and VL region of SS scFV or the complementarity determining regions of SS scFV. It is preferably conjugated to a therapeutic agent, particularly becudomonas exotoxin or its cytotoxic fragment. The resulting the growth of a mailgnant cell that expresses mesothalin on its call cancer. The antibody can also be used to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is antimesothelin antibody SS single chain Fv protein. This sequence was used to generate mutant antibody heavy or light chain variable regions, which have 5 times higher binding affinity for mesothelin antigen than the parental antibody (the present sequence). The mutant proteins of the present invention have substition(s) in the complementarity determining region (CDR). Malignant cells express mesothelin on their surfaces, and so the mutant proteins of the present invention can be used to target immunoctoxin to cells expressing the present invention can their surface i.e. malignant cells. The mutant proteins of the present invention can therefore be used to treat ovarian cancers, mesotheliomas, and several other types of human cancers in which the cells bear the mesothelin antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                       Novel polypeptides comprising mutated antimesothelin antibody heavy o
light chain variable region, having greater binding affinity for the
antigen, useful as diagnostic and therapeutic agents for ovarian

This sequence represents an example of a secreted single chain antibody Fv fragment (in this case, directed against the 5T4 antigen), which is involved in transcellular localisation. A secreted single chain antibody Fv fragment can be fused to cytochrome P450 reductase (P450R) derivatives such as anchorless P450R (AAY42287) or FN fragment (AAY42288). This enables the fusion protein to be delivered to other ectls where it is then transported to the nucleus. Many drugs' sites of action are in the nucleus, rather than the cytoplasm, where P450R normally functions. P450R or its derivatives can be used to activate prodrugs to their active form via reduction. Administration of a prodrug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytochrome, targetting; localisation; cancer; tumour; prodrug; reduction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New prodrug activating agent targeted to selected cells or tissues, particularly hypoxic cells, for treating e.g. tumors -
                                                                                                                                       MAb capable of binding to the gamma chain of the IL-2 receptor, and thus of blocking the IL-2 response, is produced by mouse hybridoma line GP-4 (FREM BP-4640). DNA encoding the variable region of this MAb was expressed in E. coli, yielding Fv(GP-4) with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó;
                                                                                                                                                                                                                                                          This invention describes novel antibodies that immunospecifically bind to Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common wariable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method

arthritis, or conditions associated with hypoxia, hypoglycemia or ischemia, or conditions associated with hypoxia, hypoglycemia or ischemia, or to deliver antibiotics, antiviral agents, analgesics, anesthetics, anti-inflammatories, antineoplastic agents and diagnostic agents. LD optimize activity of PAD, e.g. by delivering it to selected locations or by delivering it to neighboring cells (bystander effect) and allow a reduction in dose of prodrug, and thus of systemic side-effects. Nucleic acids encoding the agent may be expressed selectively in hypoxic cells. The present sequence represents the single chain variable antibody fragment against the tumor antigen 5T4 (5T4 scPv). 5T4 scPv and a human P450 reductase derivative alP450R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New vector encoding a tumour interacting protein for treating cancer - contains a desired nucleotide sequence and/or protein which recognises tumours, and is used as a gene delivery system to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This amino acid sequence comprises an scFv, termed 5T4scFv.1, comprising the heavy chain variable region (VH) from the murine 5T4 monoclonal antibody followed by a 15-amino acid flexible linker and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides a new prodrug activating agent that comprises: (i) a localization domain (LD; other than a tumor-selective antibody) and a prodrug activating domain (PAD); (ii) at least one nucleic acid encoding a cytochrome P450 and under control of at least one constitutive or inducible expression control sequence or (iii) a modified hematopoietic stem cell (MHSC) containing at least one nucleic acid encoding a PAD and under control of elements as in (ii). The prodrug activating agent or vectors that express them, are specifically used to treat tumors, inflammation, atherosclerosis and muscular dystrophy, but may also be
is useful where the active drug may be metabolised before it reaches its site of action or where the active drug is cytotoxic, e.g., anticancer drugs. Targetred delivery of such prodrug activators allows a reduction in dose of the prodrug, and thus of systemic side-effects. P450R derivative fusion proteins, or vectors that express them, are specifically used to treat tumours, inflammation, atherosclerosis and muscular dystrophy, but may also be used to treat many other conditions, e.g., cerebral malaria, rheumatoid arthritis, or conditions associated with hypoxia, ischaemia or hypoglycemia, or to deliver antibiotics, antiviral agents, analgesics, anaesthetics, anti-inflammatories, antineoplastic agents and disgnostic agents.
                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New prodrug activating agent targeted to selected cells or tissues, particularly hypoxic cells, for treating e.g. tumors or inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Kan O, Griffiths L;

the light chain variable region (VL) of the mouse 5T4 antibody. The trophoblast cell surface antigen defined by monoclonal antibody 5T4 is expressed at high levels on the cells of a wide variety of human tumours. 5T4scFv.1 DNA (see AAV80290) can be used to construct single-chain antibodies (see AAV80039) and scFv fusion constructs (see AAV860040-05). The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which conditions a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) conto a haematopoietic cell lineage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single chain antibody; ScFv; inflammatory disease; arthritis; cancer; hypersensitivity; autoimmune disease; central nervous system disorder; Parkinson's disease; periodontal disease; cardiopulmonary disease; cardiovascular disease; gastrointestinal disorder; infection; diabetes; Helicobacter-related disease; immune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated

molecule

```
which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament for affecting a disease in vivo, for preparing a pharmaccutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treatment of a disease. The ScFv antibody is also useful for adjuvant treating inflammatory diseases, including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiovalumenary diseases, and other immune diseases. The present sequence related diseases, and other immune disorders. The present sequence represents a ST4 ScFv of the invention. The antibody comprises the VH and VL regions from murine ST4 monoclonal antibody, joined by a linker sequence.
                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BLys; B lymphocyte stimulator; TNF superfamily; human, cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomobulatory; antirheumatic; antiAIDS; vaccine; cancer; immune; autoimme disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the
             specification describes the use of a single chain antibody (ScFv)

ô
tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiALDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency syndrome (ALDS)). ABP473290 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                              Gaps

RESULT 39

```
amplified by PCR methods. A gene fusion was constructed from the two amplified domains and a (Gly4Ser)3 linker. The amino terminus of the VL-VH fusion cassette was fused at the SalI site to the L6 light chain variable region leader peptide and the carboxy-terminus was fused directly to the hinge region of the FC domain at the BclI site and/or to a short "helical" peptide linker to construct the bispecific CD3-L6FvIg antibody derivative. The variable regions for L6 were fused in frame to the opposite end of

```

This sequence is the single-stranded antibody of the invention, that has the capability of binding to a hepatitis B virus (HBV) core protein. Therapeutic agents can be formulated with the antibody for treatment of HBV infections by stopping proliferation of the virus through inhibition of viral DNA synthesis, and the gene encoding the antibody can be applied as an agent to gene therapy.

297 AA;

Sequence

Single-stranded antibody against hepatitis B virus core protein, applicable as (gene) therapeutic agents for treatment of hepatitis viral infections

New vector encoding a tumour interacting protein for treating cancer - contains a desired nucleotide sequence and/or protein which recognises tumours, and is used as a gene delivery system to treat cancer

Example 5; Fig 2; 82pp; English

This is the amino acid sequence of B7-1.5T4.1, a fusion protein comprising the extracellular domain (amino acids 1-215) of human co-stimulatory molecule B7-1 joined via a flexible peptide linker to an scFV (see AAW8602) derived from murine 5T4 monoclonal antibody. B7-1.5T4.1 cDNA (see AAV80292) can be inserted into vector por to allow expression of the fusion protein in mammalian cells. The trophoblast cell surface antigen defined by 5T4 is expressed at high levels on the cells of a wide variety of human timours. The invention relates to a vector comprising a nucleotide sequence invention relates to a vector comprising a nucleotide sequence coing for a tumour interact (NOI) which encodes a protein of interest (POI), the vector being capable of delivery can be in vivo or ex vivo. The vector being capable of delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as agene delivery system for introducing at least 1 gene cencoding a TIP (preferably a tumour binding protein) into a mammalian collaboration at TIP (preferably a tumour binding protein) into a mematopoietic cell lineage. B7-1 is expected to bind specifically to CD28 and CTLA-4 present on human T-cells.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
Sequence 17, Application US/08444644
Patent No. 6015555
GENERAL INFORMATION:
APPLICANT: Friden, Phillip M.
TITLE OF INVENTION: TRANSFERRIN RECEPTOR SPECIFIC
TITLE OF INVENTION: ANTIBODY-NEUROPHARMACEUTICAL OR DIAGNOSTIC AGENT
TITLE OF INVENTION: CONJUGATES
NUMBER OF SEQUENCES: 46
CORRESPONDENCE ADDRESS: ADDRESSE: Hamilton, Brook, Smith & Reynolds, P.C.
STREET: Two Militia Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   348,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 18, Application US/09813659

Sequence 18, Application US/09813659

Patent No. US20020012999A1

GENERAL INFORMATION:

APPLICANT: Ledbetrer, Jeffrey A.

APPLICANT: Bajorath, Jurgen

APPLICANT: Gilliand, Lisa K.

TITLE OF INVENTION: EXPRESSION VECTORS ENCODING BISPECIFIC FUSION PROTEINS

TITLE OF INVENTION: AND METHODS OF PRODUCING BIOLOGICALLY ACTIVE BISPECIFIC

TITLE OF INVENTION: PUSION PROTEINS IN A MAMMALIAN CELL

FILE REFERENCE: 30436.18USD2

CURRENT APPLICATION NUMBER: US/09/813,659

CURRENT FILING DATE: 2001-03-21

PRIOR APPLICATION NUMBER: 09/549,067
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PERDEAL INFORMATION:
